# STANDARD OPERATING PROCEDURE OF EYE BOLTS PULL OUT LOAD TEST

## PULL OUT TESTING

### WHY CONDUCT PULL OUT TESTING?

Want to avoid construction malfunctions in your property? Worried that damage caused by varying temperatures could have caused fixings to become weak and loose? Our pull out testing service will provide the answers.

Normally performed to establish the strength of fixings that have been installed or fitted into walls, our pull out tests are vital for commercial buildings, railways and airports.

There are many factors that can affect the strength and durability of eyebolts, anchor bolts, scaffold ties, stud anchors, resin bolts and safety wires, so it is vital that they are regularly checked and pull out tested. This is especially the case when visual inspection is just not enough. This is where Pull Out Testing COSMOS comes in.

Having worked in the industry for more than 15 years, our highly skilled and professional team utilise their vast experience to provide you with the very best pull out testing services.

### HOW IT WORKS

Our pull out testing involves attaching a small piece of equipment to the exterior bolt, nut, screw or fixing. This is then pulled to the designated stress load level to determine how strong and secure the fixing is. Even though materials used for bonding may be different, this method remains the same for all types of fixings.

This type of service enables early diagnosis of potential strength problems and although we cannot help with the building work should your fixings fail our test, we can provide honest and impartial advice as to what to do and who to speak to.

## COMPREHENSIVE SERVICE

Here at Pull Out Testing COSMOS, we also provide extensive Third Party reports to show whether the fixings have passed or failed the required stress load levels. These levels are specified by you before you begin, so you have a conclusive idea as to the working capacities of your fixings.

We provide our pull out tests for customers across India and have worked on projects involving construction companies, software companies, schools, erection companies, access companies, scaffold specialists, air conditioning companies and builders.

If you would like any more information about our range of pull out testing services, please do not hesitate to **contact one of our helpful and highly experienced team.**
